PROJECTS

HOTEL MANAGEMENT SYSTEM

- Developed a scalable full-stack web application using the MERN stack .
- Built a dynamic and responsive frontend with React and TypeScript.
- Created a robust Backend using Node.js, Express.js, and MongoDB.
- Developed RESTful APIs to enable smooth frontend-backend communication.
- Designed and implemented UML diagrams to model system architecture.
- Utilized TypeScript throughout for improved type safety and maintainability.

PERSONAL FINANCE TRACKER APP

- Developed a mobile application using Kotlin and Java in Android Studio for high performance and device compatibility.
- Designed and implemented the backend using Firebase.
- Created intuitive and user-friendly interfaces with Figma, emphasizing user-centric design and accessibility.

SKILL SHARE PLATFORM WEB APPLICATION

- Developed a full-stack web application using Spring Boot for the backend and React with Vite for the frontend.
- Implemented MySQL Workbench for database design and management.
- Built responsive and user-friendly interfaces using React, JavaScript, and CSS.
- Created RESTful APIs with Spring Boot to enable communication.

BLOOD DONATION MOBILE APPLICATION

- Developed a cross-platform mobile application using Flutter and Dart in Visual Studio Code.
- Integrated Firebase for backend services, including authentication, database, and cloud functions.
- Utilized Git for version control and collaborative development.
- Ensured responsive UI/UX across devices with Flutter's widget-based architecture.

ONLINE MUSIC STORE WEBSITE

- Developed a responsive website Frontend using HTML, CSS, and JavaScript.
- Implemented a robust backend in Java for secure server-side logic and data processing.
- Designed UML diagrams to model system architecture, user interactions, and data flow.
- Used JavaScript to add dynamic features, improving interactivity and user engagement.
